Managed Long Term Services and Supports (MLTSS)

Overview

For the purpose of assuring network adequacy, the Contractor must submit a provider network to the Department in a MS-Excel spreadsheet. The spreadsheet must be provided electronically.

The Contractor shall submit those providers with whom it has a signed contract or a letter of intent (LOI). A complete list shall include all providers that are contracted with a subcontractor of the Contractor and will be rendering services to MLTSS members.

Consistent with Virginia General Assembly directives in years 2011 through 2015, the Department of Medical Assistance Services (DMAS) is moving forward with proposed initiatives to expand principles of care coordination to all geographic areas, populations, and services under programs administered by the Department. The expansion of care coordination shall be based on the principles of shared financial risk such as shared savings, performance benchmarks or risk and improving the value of care delivered by measuring outcomes, enhancing quality, and monitoring expenditures.

Provider Network Adequacy Data System (PNADS)

The Provider Network Adequacy Data System (PNADS) will be built to gather information about the Managed Care Long Term Services and Support (MLTSS) Medicaid providers and their service networks.

Purpose for PNADS

The primary purpose for the PNADS is to collect data need to evaluate and determine provider network adequacy for MLTSS member.

Uses of PNADS Data

1. Provider Eligibility Assessment

PNADS data must be submitted in a MS Excel format by the Contractor.

2. Comprehensive Services Assessment

DMAS uses data from the PNADS to assess whether Contractors have signed agreements with an appropriate range of primary care practitioners, clinical specialists, nursing facilities, and service facilities (hospitals, labs, behavioral health care providers, adult day care centers, waiver services providers, home health care providers, physicians, etc.) within the Contractor's service area. Evaluations are completed on Contractors serving MLTSS members.

3. Network Analysis

PNADS data is used to analyze and evaluate the Contractor's provider network's adequacy.

NOTE: It is required that contracted health plans contract with all Community Service Boards within the service area that they have been approved for participation.

PNADS Data File Layout Specifications

- The entire network shall be in one file, formatted as shown below.
- Do NOT submit separate files or separate worksheets within one file.
- If a provider has more than one physical office location, each location should be submitted; however, list each provider location separately.
- If a provider has more than one provider designation, each designation should be submitted; however, list each designation separately. (See example on page 13.)
- A provider with more than one taxonomy and/or specialty in one location should be listed once, under their primary specialty.
- A provider with one or more taxonomy with more than one location (meaning a separate and different address) should be listed once per location using their primary taxonomy.
- List each separate location on a separate row in the spreadsheet.

Submissions not meeting these requirements will be rejected and returned. To be evaluated, a corrected file must be returned within ten (10) calendar days; otherwise, the network requirements will be rated unsatisfactory.
